Claim 1; SEQ ID 25694; 29pp + Sequence Listing; German.

Set of oligonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine

methylation status

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNB) and cytosine methylation scatus in clemically precreated genomic DNA. The oligonocieotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastronnestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. ABRO0010-ABRO9989, ABRO0010-ABRO9989, ABRO0010-ABRO9989, DABRO0010-ABRO9989, DABRO0010

Set of oligonucleotides, udesigned to detect single methylation status useful for diagnosis and cell typing, e nucleotide polymorphisms and cytosine

ž

This invention describes novel oligonucleoride primers or peptide nucleic acid (PNA) oligomers for detecting single nucleicide polymorphisms (SNP) and cycosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gestrointestial, respiratory, central nervous system, cardiovascular and metabolic disorders. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                              This invention describes novel oligonucleotide primare or peptide nucleic acid (BNA) oligoners for describing single nucleotide polynomythisms (SNP) and cytosine mathylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gestrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The olither are also used for describing call type differentiation.

The oligomocleotides are used for disgnosis and/or prognosis of cancer and a range of diseases including immune system, gastroninestinal, respiratory, central narrous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. Oligomers are also used for detecting cell type differentiation.

                                                                                                                                                                                                                                                This invention describes novel oligonucleotide primers or peptide muchaic acid (DNA) oligoners for detecting single nucleatide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders The oligoners are also used for detecting cell type differentiation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Olek A,
This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The
                                                                                                                                                        Set of oligonuclectides, useful for diagnosis and cell typing designed to detect single nucleotide polymorphisms and cytosine methylation status
                                                                                                                                                                                                                                                                                                                     Olek A,
                                                                                                                                                                                                                                                                                                                                                                                                                               07-APR-2000; 2000DE-1019173
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200177384-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             central nervous system; gastrointestinal; respiratory; immune; metabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS peptide nucleic acid; cytosine methylation; cardiovascular; primer; ss;

```

Set of oligonuclectides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine

Claim 1; SEQ ID 39175; 29pp + Sequence Listing; German

This invention describes novel oligonucleotide primary or peptide nucleis cald (RMA) oligoners for detecting single outlevide polymorphisms (SNP) and opposits new primary cald (RMA) oligoners for detecting single outlevide polymorphisms (SNP) and opposits permarked permarked primary calls of the primar Norg: The sequence dies for this prient did not form part of the printed specification, but was obtained in electronic format from MIPO at ftp. wipo.int/pub/published\_pot\_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel oligonuclearide primers or peptide muclais acid (RNA) oligoners for detecting single nuclectides plymorphisms (SNB) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for disponsis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. ABIO0010-ABIS973 represent the oligoners described in the invention. MOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from MIPO at the published pot_sequences.

methylation status designed to detect single nucleotide polymorphisms Set of oligonucleotides, useful for diagnosis and cell typing, and cytosine

Claim 1; SEQ ID 39610; 29pp + Sequence Listing; German

This invention describes novel oligonucleotide primers or peptide nucleic acid (RNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cyrcosine methylation seatus in chemically pretreated genomic DNA. The oligomorphisms are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders The oligomers are also used for detecting cell type differentiation.

Sequence 13 BP; 8 A; 1 C; 0 G; 4 T; 0 other;

This invention describes novel objounce ordered by primary or peptide nucleic acid (PNA) oligomers for detecting single nucleatide polynophisms (SNP) and cyrosine methylation status in chemically poterasted genomic DNA. The oligomulectides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gestrointestinal, respiratory, central nervous system, conditionate and metholic disorder. The oligomers are also used for describing cell type differentiation.

MINIORAL PROGNOS ASSOCIATED ASSOCIATED

Claim 1; SEQ ID 45670; 29pp + Sequence Listing; German

methylation status -

Set of oligonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oligomic leotides are used for diagnosis and/or prognosis of camer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation.                                                                                                                                           and cyrosine methylation status in chemically pretracted general and cyrosine methylation status in chemically pretracted general and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation.

BECORDIO-ABECO9313 represent the oligomers described in the invention. MOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from MIPO at fifty wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Olek A,
                                                                                                               Sequence 13 BP; 7 A; 3 C; 0 G; 3 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                  Set of Oligonuclectides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine methylation status -
                                                                                                                                                                                                                                                                                                                                   This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNP)
                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; SEQ ID 48800; 29pp + Sequence Listing; German

                      This invention describes novel oligonucleotide primers or peptide nucleic acid (BNA) oligoners for detecting single nucleotide polymorphisms and and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for discossis and/or progness of cancer, and a range of discesses including immediate and metabolic disorders. The central nervous system control discribes. The control of the princed specification, but with so dailed in electronic format from HTD at the control of the control of the control of the princed specification, but with so dailed in electronic format from HTD at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Set of Oligonucleotides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine methylation status
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNF, peptide nucleotide polymorphism; human; diagnosis; PNA; cancer; CNF, peptide nucleic acid; cytocsine methylation; cardiovascular; primer; ss; central nervous system; gastrointestinal; respiratory; immune; metabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 range of diseases including immune system, gestrointestinal, respiratory, central nervous system, cardiovascular and metabolic discorders The oligomers are also used for detecting cell type differentiation.

ABG00010-ABG299999, ABG00010-ABE399999, ABH00010-ABH99989 and invention.

ABG00010-ABH8003 represent the oligomers described in the invention.

NOTS: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel oligonucleotide primers or peptide nucleic and (PNA) oligomers for detecting single motleotide polymorphisms (SNP) and cytopine methylation status in chemically pretreated pennic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a

                                                                                                                                                                                                                                                                                               range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovasconiar and metabolic discoders. The children are also used for descript cell type differentiation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel oligonucleotide primers or peptide nucleic acid (BNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SNP; single mucleotide polymorphism; human; diagnosis; PNA; cancer; CSR; peptide nucleotide acid; cytosine methylation; cardiovascular; primer; CSR; central nervous system; gastroinuestinal; respiratory; immune; metabolic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel oligonucleotide primary or poptide muchic acid (DNN) oligoners for detecting single nucleatide polymorphisms (SNP) and cytonine mathylation setatus in chemically pretreated genomic DNN. The oligonucleotides are used for disposis and/outprises and a range of diseases including immume system, gastpropriation, respiratory, acception and exact propriate and exact propriate. The contract previous system, outprises are also used for detecting cell type differentiation. Only one of the contract propriate and exact propriate action, and the propriate action, and the contract propriate action. The oligonuclectides are used for diagnosts and/or processes including immune system, gastrooperation, concert and a central nervous system, conditional control of standard sespiratory. Concert and exact of the control of standard sespiratory of the control of standard sespiratory. Control processes are also used for detecting call type differentiation.

NICHOLOGICAL SESPICES ARROUND ARRO
                                    This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosiams methylation status in chemically pretreated genuic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a
                                                                                                                                                                                                                                                                                  set or origonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine methylation status
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Olek A,

Claim 1; SEQ ID 85246; 29pp + Sequence Listing; German

mis invertion describes novel oligonulastide primers or peptide nuclaic acid (DNA) cligoners for describe gaingles nuclastide polymorphisms (SNA) and cyrosine mathylation attents (associated polymorphisms (SNA). The cligonucleotides are used storidagnosis and/or prognosis of cancer and a range of diseases including immunelly seem gaschitestinal, respiratory, and comital herooms system, calciumated and metabolicastinal, respiratory, oligoners are also used for describer and metabolicastinal conditions. Oligoners are also used for describer and metabolicastinal conditions (1900) and (1900) Sequence 13 ftp.wipo.int/pub/published\_pct\_sequences. B₽; 8 A; 2 C; 0 G; 3 T; 0 other;

                                                                                                                                                                                           This invention describes novel oligonuclostide primary or peptide muleic acid (BNA) oligoners for detecting sigle nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for dispossis and/or prognosis of cancer and a range of diseases including immune system, gattrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. ABIO0010-ABIO9399, ABIO0010-ABIO9399, ABIO0010-ABIO9399, and ONTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at fip.wipo.int/pub/published_pot_sequences.

Set of oligonucleotides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine methylation status

Claim 1; SEQ ID 87342; 29pp + Sequence Listing; German

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNN) oligoners for describing single nucleicide polymorphisms (SNP) and cyrosine mathylation status in chemically prescribe genomic pNN. The oligonucleotides are used for disponsic and/or prognosis whom the contrast including immune system, gentrointestinal, respiratory, central nervous system, cardiovascular and metabolic disportees. The ciliponers are also used for describing call type differentiation.

1013cm/srr are also used for describing call type differentiation.

1013cm/srr are also used for describing call type differentiation.

1013cm/srr are also used for describing call type differentiation.

1013cm/srr are also used for describing call type differentiation.

The oligomers are also used for descenting cell rupe differentiation. Nacionol. Algossystem, and the system of the properties of the properties of the properties of the properties. National National National represent the oligomers described in the invention. NOTS: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from NIFO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNA) and cycosine methylation status in chemically pretracted genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a oligonucleotides are used for diagnosis and/or prognosis of cancer and a
                                                         This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleic describe polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gentrointestinal, respiratory, central nervous system, cardiovascular and metabolic discrete: The oligoners are also used for desecting cell type differentiation.

                                                                                                                                                                                                                                                                                                 This invention describes novel oligonucleonide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SRP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for disponsis and/or prognosis of cancer and a range of diseases including immune system, gastionizestimal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. AB100010-AB209999, ABF00010-ABE99999, ABF00010-ABE9999, ABF00010-ABE99999, ABF00010-ABE999999, ABF000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SNP; single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS; peptide nucleic acid, cytosine methylation; acardiovascular; primer; sNS; peptide nucleic acid, cytosine methylation; acardiovascular; primer; sNS; peptide nucleic acid, cytosine methylation; acardiovascular; primer; sNS; peptide nucleic acid, cytosine proprieta in the pro

                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes novel oligonous leavise primers or peptide multiple and (IRMA) oligoners for describing single numberide polynophisms (NPP) and cytosine methylation status in chemically prescrated genomic DNA. The oligonous for disposals and/or prognosis of cancer and a componient of cancer and a componient of cancer and a range of diseases including immune system, gentrolineshind, respiratory, central nervous system, cardiovascentar and metabolic disorders. The control nervous system, cardiovascentar and metabolic disorders. The control nervous system, cardiovascentar and metabolic disorders. The control nervous system of diseases in the system special type differentiation.

MERICONIO-ABIGRATIA appressant the oligonous described in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel oligonucleocide primers or peptide nucleic acid (PMA) oligonaris for detecting single nucleocide polymorphisms (SNP) and cytosine methylation setted in chamically pretreated genomic DNA. The oligonucleocides are used for disposes and/or progness of cancer; and a central nervous system conditions in the control of control contro

This invention describes novel obiopopulsoride primers or peptide nucleic acid (PNA) oligomers for describe giopopulsoride primers or peptide nucleic acid (PNA) oligomers for describe giopopulsoride size and organizate describe size of the primers and organizate describes are used for diagonais and/or propoposis of concer and a range of diseases including immune system, gestrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The exploration of the system of the primers are also used for describe call probability distribution.

NOTES, The sequence data for this picton did not form part of the printed specification, but was for this picton did not form part of the printed frecitories for the printed frecitories for the printed frecitories of the printed frecitories of the printed frecitories for the printed frecitories of the printed frecitories for Sequence 13 BP; 3 A; 0 C; 4 G; 6 T; 0 other; ftp.wipo.int/pub/published\_pct\_sequences.

                                                                     This invention describes novel oligonucleotide primers or peptide nucleic acid (DNA) oligoners for detecting single nucleotide polymorphisms (SNP) and cytosine methylation satus in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and cyrcoine methylation status in chemically pretreeted genomic DNA. The oligonucleotides are used for disgnosis and/or prognosis of cancer and a range of diseases including immus system gentrolatestimal, respiratory, central nervous system of diseases. The oligonare are also used for diseases and membridge diseases. The oligonare are also used for diseases and diseases and differentiation.

                                                                                                                                                                                                                                                     This invention describes rovel oligonucleotide primers or peptide nuclei acid (BNA) oligoners for detecting single nucleotide polynophisms (SND) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a control of diseases standhing memore system, gentroinestinal, respiratory, central nervendes cardiovascular and metabolic disorders. The control nervendes of cardiovascular and metabolic disorders. The collisioners are also assessed or descenting cell type differentiation. Oligoners are also assessed or descenting cell type differentiation. Matterial and control represent the oligoners described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIDO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes novel oligonucleotide primers or peptide nucleic acid (PNN) oligoners for detecting single nucleatide polymorphisms (SNP) and cyrosiane methylation exatus in chemically pretreated genomic DNN. The oligonucleotides are used for disgnosis and/or prognosis of cancer and a range of diseases including immune system, gestrointestinal, respiratory, central nervous system, cardiovascollar and metabolic disorders. The oligonurs are also used for detecting cell type differentiation.

The oligonousleotides are used for diagnosis and/or prognosis of cancers and a range of diseases including immune system, gentroinestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. AECO0010-AEC09989, AECO0010-AEC99989, AECO0010-AEC99989, AECO010-AEC99989, AECO010-AEC

       This invention describes novel oligonuclectide primars or peptide nuclei acid (PNA) oligoners for detecting ships nucleatide polymorphisms and acytosine methylation status in chemically pretreated genomic DNA. The oligonuclectides are used for disposis and/or progness of cancer and a range of diseases including number system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for desecting coll type differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel oligonuclectide primers or peptide nuclei acid (DNA) oligonors for detacting initials nucleotide polymorphisms and options to detacting initials nucleotide polymorphisms and options and options are used for disapnosis and/or progness of cancer, and a regular control of diseases including immensions and metabolic disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABCOOMIO-ABC99999, ABFOOMIO-ABF99999, ABHOOMIO-ABH99999 and ABCOOMIO-ABE9073 represent the Oligomers described in the invent: MOTE: The sequence data for this patent did not form part of the peritication, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pcr_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SNP; single nuclectide polymorphism, human; diagnosis; PNA, carcer; CNS, peptide nucleic acid; cytosine methylation; cardiovascular; primer; ss; central nervous system; gastrointestinal; respiratory; immune; metabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Set of oligonuclectides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Oligonucleotide SEQ ID NO 117143 for detecting SNP TSC0029312

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0 ```

This invention describes novel oligonucleotide primers or peptide nucleic active (PNA) oligoners for detecting single nucleotide plymorphisms (NR) and cytosite methylation status in chemically pretracted genemic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a Sequence 13 BP; 3 A; 0 C; 3 G; 7 T; 0 other; :tp.wipo.int/pub/published\_pct\_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes noval oligomuclocide primers or peptide nucleic acid (PRM) oligomucs for detecting single nucleicide polymorphisms (SNEP) and cytosine methylation status in chemically pretreated genomic DNN. The oligomuclocides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, call of the control of the primed precification, but so that patent did not form part of the primed pecification, but with obtained in electronic format from which all primed pecification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SNP; single nucleotide polymorphism; human diagnosis; PRA; primer; CNS; peptide nucleot acid; cytosine methylation; cardiovascular, primer; ss; central nervous system; gastrointestinal; respiratory; immune; metablot;

This invention describes provel oligonucleotide primers or peptide muclaic acid (BNA) oligomers for detecting single nuclacide polymorphisms (SNP) and cytosine methylation status in chamcally precreated genomic DNA. The oligonucleotides are used for disposals and/or prognosis of cancer and a range of disposes including immune system, gastrointeetinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010-ABC99399, ABC00010-ABC99399, ABC00010-ABC99399, ABC00010-ABC99399, aBC0010-ABC99399, aBC0010-ABC9
                                                                                                                                                                                                                                                                                                                                                                                                                                      designed to detect single nucleotide polymorphisms and cytosine methylation status -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        acid (PAN) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in otherically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, ardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation.                                                                                                                                                                                                                                                                                      This invention describes novel oligonucleotide primary or pectide nuclei acid (DNA) oligonary for detecting single nucleotide polymorphisms (SNB) and cytosine methylation status in chemically pretroated genetic UNA. The oligonucleotides are used for disgonists and/or prognosis of cancer and a range of diseases including immune system, gastrolinestanl, respiratory, central nervous system, outdownscular and metabolic disorders. The oligonarys are also used for detecting call type differentiation.

NETROJOL-NETS9995, Appropriate the oligonarys described in the invention.

NOTE: The sequence data for this patient did not form part of the printed specification, but was obtained in electronic formatt from NIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Set of oligonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine methylation status -

Olek A, (EPIG-) EPIGENOMICS AG Piepenbrock C, Berlin K;

Set of oligonucleotides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine methylation status 18

Claim 1; SEQ ID 123280; 29pp + Sequence Listing; German

and cytogine methylation etatus in chemically pretreated genomic UNA. The oligonal product and are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gentrointestinal, respiratory, central nervous system, andiovascular and metabolic disordors. The oligonary are also used for detecting call type differentiation.

Accompto. Accomps. Astronot. Aggresses, Astronot. Assenses Astronoto-Astropasses. ABIOOOLO-ABI82073 represent the oligomers described in the invention. MOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) ftp.wipo.int/pub/published\_pct\_sequences.

This invention describes novel oligonucleotide primares or peptide nucleic acid (PNA) oligoners for detecting single nucleatide polymorphisms (NMP) and cycosine methylation status in chemically pretracted genomic DNA The oligonate that are used for diagnosis and/or prognosis of concer and a range of diseases including immune system, gestrointestinal, respiratory, central nervous system, availousecular and metabolic disordates. The oligoners are also used for descriing call type differentiation.

MICHAEL The sequence data for this plagment described in the invention. MOTES The sequence data for this placent did not form part of the printed specification, but was obtained in electronic format from MICP at the printed specification, but was obtained in electronic format from MICP at

Olek A, (EPIG-) EPIGENOMICS AG Piepenbrock C, Berlin ~

WPI; 2001-657177/75

Set of oligonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine methylation status -

Claim 1; SEQ ID 126073; 29pp + Sequence Listing; German

This invention describes novel oligomuoleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligomucleotides are used for diagnosis and/or prognosis of cancer and a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes rovel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNP) and cyrosine methylation scarue in Chemically pretreated genomic DNA. The oligonucleotides are used for disponsis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation.                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
This invention describes novel oliconvolactide primers or peptide nucleic acid (PWA) oliconers tor detecting said nucleotide polymorphisms (SNP) and cytosize methylation status and page and cottage of morphisms (SNP) and cytosize methylation status and processed generic DNA. The oligonaria control of account and a central nervous system, cardiovascular and methylation in the central nervous system, cardiovascular and methylation. The account of the central nervous system, cardiovascular and methylation. The company of the central nervous system and control type difficultion. The sequence of the control of the central control of the central nervous system and control of the central nervous system of the central control of the central nervous system of the central nervous syste
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Set of oligonucleotides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine methylation status
                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; SEQ ID 128359; 29pp + Sequence Listing; German
